Objective

A software engineer with a solid foundation in software development and machine learning, proficient in Java, Python and SQL. I am passionate about developing web and data-driven solutions, leveraging Data Visualization and AI models to address business challenges. I focus on delivering time-efficient, impactful solutions that drive business success. Eager to apply my skills to create innovative solutions and continuously enhance my expertise in software engineering and AI technologies.

Skills

Languages: Java, Python, SQL

Tools & Technologies: Power BI, Flask, Jupyter Notebook, TensorFlow, HTML, CSS,

Database: SQL

Soft skills : Analytical thinking, Problem-solving, Team collaboration, Communication excellence

Education

Vellore Institute of Technology, Amaravati

[2021 – 2025]

B.Tech - Computer Science and Engineering - CGPA - 8.67

Guntur Andhra Pradesh

Sri Chaitanya Junior College

[2019 – 2021]

Intermediate - MPC - Percentage - 97.7

Guntur Andhra Pradesh

Experience

AI & ML Intern

Nov 2023

- Developed practical knowledge in deep learning involving the use of TensorFlow than merely adopting the models and tweaking them for the problem-solving purpose. Implemented state-of-the-art concepts in the field of AI and incorporated them to increase the model's accuracy to solve most of the issues.
- Proficiency in remote collaboration and superior methods of AI/ML helping the projects and increasing the fields' relevance.

AWS Cloud SAA Training

Nov 2023

- With the designation AWS certified Cloud Practitioner which encompasses basic concepts in cloud ownership, architectural structures, deployment methodologies, and cloud security principles.
- Gained practical knowledge of the AWS tools and services S3, EC2, Lambda, RDS, and CloudFormation as well as the specific contributions towards the development of the cloud target solutions and optimization of operational activities.

Certifications

- HTML, CSS & JAVASCRIPT - edX
- Agile Methodologies and SDLC - edX
- Power BI and SQL - edX

Projects

Phishing Attack Detection| ML, Flask, TensorFlow

Apr 2024

- Led backend development in a team project, utilizing ML algorithms (Random Forest) and neural networks (FFNN with TensorFlow and Keras) to achieve 96% accuracy in detecting phishing attacks.
- Applied adversarial machine learning techniques, enhancing model robustness and resilience to sophisticated phishing strategies.
- Enhanced phishing detection efficiency 97% and model performance by leveraging advanced evaluation metrics and iterative optimization processes.

AI assistant for Enhanced Productivity | Python, STT, TTS

Oct 2023

- Built an AI assistant with STT and TTS capabilities to open websites, fetch data while playing songs, and more using voice commands and responses.
- Combined NLP for improving natural language processing and optimizing task automation by allowing it to almost double the workflow efficiency up to 40%.

Lip Reading Application| Python, TensorFlow

- Built a real-time speech recognition model with AI features powered through TensorFlow and OpenCV
- The application does real-time speech recognition using lip movements in conversations which is driven by TensorFlow and OpenCV.
- Created and improved models, speeding up frame extraction for real-time image recognition
